

## Objective 2 - Left and Right Limits

*Interpret the notation for limits.*

[Link to section in online textbook.](#)

[Intro video for left/right limits.](#)

### Introduction to Notation

Let's look back at our notation:

Symbol	Meaning
$x \rightarrow a^-$	$x$ approaches $a$ from the left
$x \rightarrow a^+$	$x$ approaches $a$ from the right
$x \rightarrow \infty$	$x$ approaches infinity
$x \rightarrow -\infty$	$x$ approaches negative infinity

This gives us a way to talk about the limits of functions **when the limits on either side do not match**. Let's look back at our [Desmos link](#) of  $f(x) = \frac{1}{x}$  and try to evaluate the left and right limit at  $x = 0$ .

**Question 1** *Evaluate the following limits:*

$$\lim_{x \rightarrow 0^-} \left( \frac{1}{x} \right) = \boxed{-\infty}$$

$$\lim_{x \rightarrow 0^+} \left( \frac{1}{x} \right) = \boxed{+\infty}$$

This allows us to refine our definition of a limit:

**Theorem 1.** *Relating one-sided and two-sided limits*

Learning outcomes:

Author(s): Darryl Chamberlain Jr.

$$\lim_{x \rightarrow a} (f(x)) = L$$

if and only if

$$\lim_{x \rightarrow a^-} (f(x)) = L = \lim_{x \rightarrow a^+} (f(x))$$

In other words, if the limit is equal to something, the left and right limits agree (and if the left/right limits agree, the limit is equal to something). *Note: We say the limit **exists** if  $L$  is a Real number. The limit can be equal to  $\infty$  or  $-\infty$ , but we would not say the limit **exists**.*

### Evaluating One-Sided Limits - Graphically and Analytically

In Calculus I, you will learn a few tricks to evaluate more difficult limits. We will focus on evaluating limits of our elementary functions: polynomials, rational, radical, logarithmic, and exponential.

### Graphical Evaluation

When we can graph a function, it is intuitive to evaluate limits (*especially limits that go to  $\pm\infty$* ). We will scan along the function until we get *very close* to the value we are looking at. Try to evaluate the one-sided limits below.

#### Question 2

Graph of  $f(x) = 1/x$

$$\lim_{x \rightarrow 0^-} f(x) = \boxed{-\infty}$$

$$\lim_{x \rightarrow 0^+} f(x) = \boxed{+\infty}$$

$$\lim_{x \rightarrow 1^-} f(x) = \boxed{1}$$

$$\lim_{x \rightarrow -1^+} f(x) = \boxed{-1}$$

### Question 3

Graph of  $f(x) = 1/(x - 3)^2$

$$\lim_{x \rightarrow 3^-} f(x) = \boxed{+\infty}$$

$$\lim_{x \rightarrow 3^+} f(x) = \boxed{+\infty}$$

$$\lim_{x \rightarrow 2^-} f(x) = \boxed{1}$$

$$\lim_{x \rightarrow 2^+} f(x) = \boxed{1}$$

### Analytical Evaluation

If we cannot graph a function, we may want to analytically evaluate the one-sided limit. We can do this by plugging in numbers very close to the value and see what happens with the function.

**Example 1.**  $\lim_{x \rightarrow 1^-} \frac{\frac{1}{x} - 1}{x - 1} =$

If we try  $f(1)$ , we get  $\frac{0}{0}$ . This doesn't help us...

Since we don't know what this graph looks like, let's try evaluating the one-sided limit analytically. We'll try the values 0.9, 0.99, 0.999, 0.9999 since we are looking for the limit as we approach 1 from the left.

Figure 1: Function with a hole at  $x = -1$ .

$x$	$f(x)$
0.9	<span style="border: 1px solid black; padding: 2px;">-1.11</span>
0.99	<span style="border: 1px solid black; padding: 2px;">-1.01</span>
0.999	<span style="border: 1px solid black; padding: 2px;">-1.001</span>
0.9999	<span style="border: 1px solid black; padding: 2px;">-1.0001</span>

We can keep going, but based on the chart above the limit appears to be -1!

With technology, we can become more confident with this analytical approach. For us, this will be our best way to approximate limits of complicated functions.

### Caution!

Limits do not care what the value is at the point!

The left- and right-sided limits of this function are both 3, so

Figure 2: Piecewise function to evaluate.

$$\lim_{x \rightarrow -1^+} g(x) = 3$$

$$\lim_{x \rightarrow -1^-} g(x) = 3$$

and

$$\lim_{x \rightarrow -1} g(x) = 3$$

BUT

$$g(-1) = 4$$

### Practice Evaluating One-Sided Limits

For the rest of this section, we will practice evaluating one-sided limits. You can graph these functions or use the analytical approach.

**Question 4** Based on the graph, evaluate the following one-sided limits.

$$\lim_{x \rightarrow -4^-} g(x) = \boxed{0}$$

$$\lim_{x \rightarrow -4^+} g(x) = \boxed{0}$$

$$\lim_{x \rightarrow -2^-} g(x) = \boxed{3}$$

$$\lim_{x \rightarrow -2^+} g(x) = \boxed{3}$$

$$\lim_{x \rightarrow 1^-} g(x) = \boxed{6}$$

$$\lim_{x \rightarrow 1^+} g(x) = \boxed{3}$$

$$\lim_{x \rightarrow 3^-} g(x) = \boxed{-\infty}$$

$$\lim_{x \rightarrow 3^+} g(x) = \boxed{-\infty}$$

**Question 5** Let  $f(x) = (1 + x)^{1/x}$ . Evaluate the following one-sided limits below.

$$\lim_{x \rightarrow 0^-} = \boxed{2.7183}$$

$$\lim_{x \rightarrow 0^+} = \boxed{2.7183}$$

$$\lim_{x \rightarrow 1^-} = \boxed{2}$$

$$\lim_{x \rightarrow 1^+} = \boxed{2}$$
