

Objective 1 - Domain

Identify the domain on which a radical function is not defined.

Note: No direct section in the textbook discusses domain of radical functions.

You can print out [these notes](#) to follow along with the video below and keep notes to organize your thoughts.

YouTube link: <https://www.youtube.com/watch?v=65n1TcfSMBc>

I also suggest visiting [this Desmos page](#) to see how various numbers affect radical functions. Questions for this section will focus on the Domain of radical functions, as that will help us later when we try to solve radical equations.

Question 1 Write the domain of the function $\sqrt{x-5}$ in interval notation.

Feedback(attempt): The answer blocks will take parentheses and brackets like “(” or “[”. How do we decide which to include?

Question 2 Write the domain of the function $\sqrt[3]{-8x-3}$ in interval notation.

Question 3 Write the domain of the function $\sqrt[6]{-6x-5}$ in interval notation.

Question 4 Write the domain of the function $\sqrt[9]{-9x+3}$ in interval notation.
